At the beginning of the 21st century, there is sufficient knowledge to complete the by now almost eternal cycle. But who is in a position to set the course?

It is in the nature of things that there is no well-trodden path for an opportunity that has existed never before. Nor does it really fall within anyone's competence or scope of responsibility. Nor is there any pressing need for action. Or should we continue this game, which – after all - is no game at all, for a few or several generations further?
Not an easy decision!

Either way, somehow or other, at some point, the sun will rise.

Being and appearance

When we were kids, we were taught: "You shall not lie!"

Now that we are grown we wonder:

"What is the truth?"

The death cult of imperialism

Challenge level: **[easy]**

<https://capitalocene.com>

The doom all started 1700 years ago

In the 3rd century, the rulers of the Roman Empire realized that their people could be more easily controlled by the subservience of Christian philosophy. Therefore, in 380, it was elevated to the status of the Roman state church. As a result, their state religion was called "Christianity," although its fascist and hierarchical-patriarchal structure was in blatant contradiction to Christian philosophy. By the 19th century, the Roman state church, which used Christianity as a facade, spread under the term "feudalism" throughout Europe and much of the world.

Symbolic starting capital of the Roman state religion: 1 USD

How much has this capital grown in the 1,700 years up to the present day?

And who owns it anyway?

Is history repeating itself? „The Cold War“

„The Cold War“

Challenge level: **[very easy]**

<https://stacheldraht.tv>

American tilers waged the Cold War against the tilers of the USSR. Well, not really. Then maybe the painters, bricklayers or floor fitters? Not either. The housewives, commercial employees, industrial workers, taxi drivers or roofers and roof plumbers. Not again? Or then maybe the carpenters, shoemakers or watchmakers? Not either. American doctors against Russian nurses? That was never seen anywhere, neither in America, nor in Russia, nor anywhere else in the world. Neither were the garbage collectors of both countries. Nor were the children, pensioners and pregnant women? Now we have almost the entire population of both countries, but nobody waged the Cold War against each other? Which Americans waged the Cold War against which Russians?

Baptism:

Water is poured over an infant's head. The shock-like discomfort caused by the cold water, the separation from the mother as the baby is handed to the godfather, and the unfamiliar surroundings give the infant with a feeling of helplessness. This feeling associates inseparably with the sound of the bell ringing during this ceremony to form a psychological impression which becomes ingrained in the subconscious.

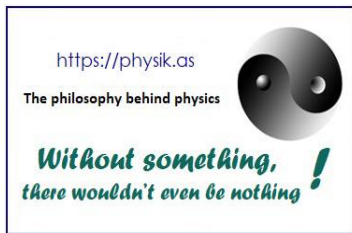

The bell tower:

Later in life: Depending on how sensitive you are every sound of the bell activates in the subconscious the feeling of helplessness. A primitive version of this method is used on pastures with cowbells and cows!

Baptism and the bell tower

Why is there actually something and not just nothing?

This question is the oldest and most fundamental question that has ever existed. To answer this question, you have to start from the very beginning. The very beginning is where the question no longer arises: "What was there before?" ABSOLUTELY NOTHING is the only term that no longer raises the question: "What was there before?" Absolutely nothing has never existed, because if there had ever been absolutely nothing, it would have always stayed that way. Because in absolute nothingness there would of course have been no possibility that this state would ever change, because even the slightest possibility would have been more than absolutely nothing. SOMETHING has therefore always been there, because if this SOMETHING had come into being, there would have been absolutely (without exception) nothing before its creation and it would have always stayed that way. **However, why hasn't there been nothing without exception and why did it not remain so?**

Special relativity

From the perspective of a stationary observer, moving objects shorten due to length contraction in special relativity. With a chainsaw we have two systems. The sword is in the rest system and the chain is in a uniformly moving system in a straight line, between which one cannot distinguish according to the principle of relativity.

How does the respective object behave in its own system and how does the respective object behave in the system of the other object? Does the chain break or does it sag? What is real? There are many perspectives, but there is only one reality!

Challenge level: **[very difficult]**

German (english not available)

Nothing can be lost irrevocably!

After all, where should it all go? Things cannot dissolve into absolutely nothing! That's what you see in all kinds of sciences. There is no single observation, measurement, or calculation that would allow for a different probability.

3.5 billion years ago, life united with the inanimate on earth to form the first cell. 1.5 billion years later, evolution brought death into life. Dying is not a part of life, but a method of evolution.

The pattern of infinity brings to light (roughly) the complex circumstances of how suffering came into this world, why death appears to us as a reality even though nothing can be lost irrevocably, and that evolution can stop pretending that there is death if we realise that we cannot really be dead.

50 years ago, the Club of Rome published the Limits to Growth

**On a planet that itself does not grow,
any system based on growth will sooner or later
exceed its natural limits.**

Nature progresses at an ever constant pace. The moon revolves around the earth at the same speed, as it always has. Just as the earth revolves around the sun and the sun in our solar system. The pace in biology has also always remained the same. Grass is not growing any faster than ever before, and a pregnancy has always lasted nine months. The pace of nature has always remained the same. Only humans are constantly increasing the pace, because their economic and financial system, which is based on unnatural growth, will die if it does not constantly accelerate. As a result, we are interfering in our living space faster than it can balance itself out. And all just to reach our goal faster! To what goal? We ourselves are the goal! I, you, he, she, it, we, you, they, are the goal.

We don't have any second Earth.

By exponentially stepping up the pace in our lives, we are pushing nature out of balance. Nature can no longer regenerate at the same rate as humans intervene. The liveable area on this planet is shrinking more and more. Centuries of astronomy have provided the certainty that there is no other planet worth living on in our solar system. 65 years of space travel has shown that we cannot reach other solar systems within a conceivable future. The future does not lie in the stars, but in this world of ours and within each and every single one of us. And everything that exists is complementary. Every advantage also harbours a disadvantage. That is why even with the help of technology we cannot rise above ourselves and our Earth. The fate of the Earth also is our fate. We are all in the same boat. We don't have a second Earth at the moment.
